SUMMARY

Senior product engineer with 5 years building web and mobile products, with deep experience in fintech and payments. TypeScript, React, Next.js, React Native, Node.js. At Nomod (YC S21; 40,000+ merchants; $350M+ annualized volume), architected a provider-agnostic payment layer processing 170k+ transactions per quarter and shipped Dynamic Currency Conversion as a new FX revenue stream.

EXPERIENCE

Alfabolt — Aug 2023 – Present

Senior Software Engineer — Embedded at Nomod (YC S21) — *Remote (UAE) · Apr 2024 – Present*

- Authored the RFC for a provider-agnostic payment layer, pitched it to the CTO and frontend team, and led the refactor of Link, Invoice, and Checkout across five providers plus Apple Pay and Google Pay, eliminating provider-specific releases.
- Co-authored the Dynamic Currency Conversion RFC and led frontend delivery across 5+ payment methods and wallets, enabling home-currency payments and a new FX-margin revenue stream.
- Built Nomod's most-requested WooCommerce gateway, cutting merchant integration time by 50%.
- Migrated card tokenization to Basis Theory and deployed CSP across four web apps; passed VAPT audit for PCI DSS.
- Led mobile KYC migration from Sumsub to AiPrise across UAE and KSA, driving 190+ merchant activations per week on a 5,500+ DAU app.
- Built end-to-end product analytics with GTM, GA4, and Meta Pixel, plus Next.js dashboards for conversion and campaign performance.

Full Stack Engineer — Pine — *Remote (Norway) · Aug 2023 – Apr 2024*

- Led a team of 3 from architecture to launch for a group-ordering app serving 10+ venues; owned the React Native app and Firebase/Cloud Functions backend.
- Designed the Stripe group-checkout flow: authorized each participant's share on join, recalculated totals as the group changed, and captured at order completion.
- Owned the serverless backend powering customer and merchant apps, including group orders, payments, loyalty, and live order updates.
- Built a loyalty engine weighted by group size, order value, and venue, with points-funded orders bypassing Stripe.
- Set up CI/CD across dev, UAT, and production for the React Native app and Firebase backend.

Devsinc — Jun 2022 – Aug 2023

Software Engineer — *Islamabad, Pakistan*

- Leaf: Led 2 engineers introducing MVVM across a private iOS/Android voice-memory app; caching and a centralized data store cut repeat-visit load times by half.
- Leaf: Built Whisper-based transcription with word-level audio sync, offline playback, and private sharing via deep links.
- MapleHR: Built a Flutter app for 1,500+ employees across 8+ modules, with ~85% test coverage and CodeMagic CI/CD.

Tuamify — Oct 2021 – Jun 2022

Software Engineer — *Islamabad, Pakistan*

- Built the Flutter and Next.js client layer of a D2C restaurant SaaS for 8+ partners; built back-office portals and analytics dashboards used for day-to-day restaurant operations.

SKILLS

Frontend	TypeScript, JavaScript, React, Next.js, React Native, Flutter, Redux Toolkit, RTK Query, Tailwind CSS
Backend & Cloud	Node.js, Firebase, Firestore, Cloud Functions
Platform & Delivery	GitHub Actions, CI/CD, Expo EAS
Payments & Security	Stripe, Adyen, Noon, AFS, Basis Theory, Apple Pay, Google Pay, Tabby, Tamara, KYC, PCI DSS, CSP

EDUCATION

National University of Sciences and Technology (NUST) — 2018 – 2022

B.E. Software Engineering — GPA 3.84 / 4.00 — *Islamabad, Pakistan*
