Summary

Frontend and mobile engineer with 4 years in fintech and consumer products. Shipped payment systems handling 170k+ transactions a quarter, led 0-to-1 product builds, and delivered across web and mobile in the same role. Comfortable owning architecture, security, and the compliance work that payments demand. Strong in TypeScript, React, Next.js, and React Native.

Experience

Lead Frontend Engineer **Mar 2025 – Present**
Nomod (via Alfabolt) *Remote (UAE)*

- Architected a decoupled, provider-agnostic payment layer across LIC (Link, Invoice, Checkout) with Google/Apple Pay, dynamic form abstraction, and automatic retry routing. Onboarded Noon, Adyen, AFS, Tabby, and Tamara with no new release cycles; the layer now handles 14k+ LIC creations/week and 170k+ transactions/quarter.
- Built Dynamic Currency Conversion for LIC, a cross-cutting feature spanning every payment provider, and shipped it with zero regressions. International customers pay in their home currency while Nomod earns the FX margin as a new revenue stream.
- Migrated card tokenization to Basis Theory for PCI compliance and rolled out CSP policies across all four Nomod web apps (LIC, Dashboard, Home, Website). The platform then passed its VAPT security audit.
- Built a custom WooCommerce payment gateway for Nomod Checkout that cut merchant integration time 50% and grew transaction volume 4%.
- Authored RFCs for 3+ major features and set up the team's routine for Next.js and Node.js upgrades, security patching, and dependency maintenance.

Mobile Engineer **Jun 2024 – Mar 2025**
Nomod (via Alfabolt) *Remote (UAE)*

- Implemented the in-app KYC migration from Sumsub to AiPrise for UAE and KSA. The new flow reached 14.5% conversion and 190+ weekly activations on a 5,500+ DAU app rated 4.5+.
- Delivered Nomod's Membership feature end-to-end across iOS and Android: a subscription tier with same-day payouts, business verification, and branded Link, Invoice, and Store customization.
- Shipped the cross-platform BNPL rollout on mobile across LIC and the Nomod app.

Lead Software Engineer **Aug 2023 – Jun 2024**
Pine (via Alfabolt) *Remote (Norway)*

- Led a team of 3 to take a B2B2C group food-ordering platform from 0 to MVP and into production. It holds a 5.0 App Store rating across 10+ restaurant partners.
- Designed the group-ordering payment split, the mechanic that let a group check out without one person fronting the bill: recalculated each member's share as people joined or left a shared cart, then charged each share directly through Stripe.
- Built the loyalty system to reward bigger groups and bring customers back: points weighted by group size, order value, and restaurant, redeemable to fully cover an order and skip payment entirely.

Software Engineer **Jan 2023 – Aug 2023**
Leaf (via Devsinc) *Remote (US)*

- Took over a broken Flutter codebase, migrated it to MVVM, and cut screen load times 15% with caching, lazy-loading, and a centralized data store. Integrated OpenAI Whisper for voice transcription and ChatGPT for personalized story generation.
- Added Google and Apple sign-in that improved signup rates around 20%, and shipped a story-sharing wall that lifted week-one retention 3.5%. The app reached 10k+ downloads and ranked #53 on Product Hunt.

Software Engineer **Aug 2022 – Mar 2023**
MapleHR (via Devsinc) *Islamabad, Pakistan*

- Built the entire Flutter app from scratch on MVVM for an internal platform serving 1,500+ employees: 8+ core modules against a Ruby on Rails backend, around 85% test coverage, and CodeMagic CI/CD.

Skills

Languages: TypeScript, JavaScript, Dart, Python, SQL, HTML/CSS
Frameworks: React, Next.js, React Native, Flutter, Node.js, Express, Redux, Tailwind CSS
Infrastructure: Firebase, Google Cloud Platform, GitHub Actions, Expo EAS, Sentry
Domain: Payment integrations (Stripe, Apple/Google Pay, Adyen, Tabby, Tamara), KYC, PCI compliance, MVVM architecture

Education

National University of Sciences and Technology (NUST) 2018 – 2022
B.E. Software Engineering (GPA: 3.84/4.00) *Islamabad, Pakistan*
